memories

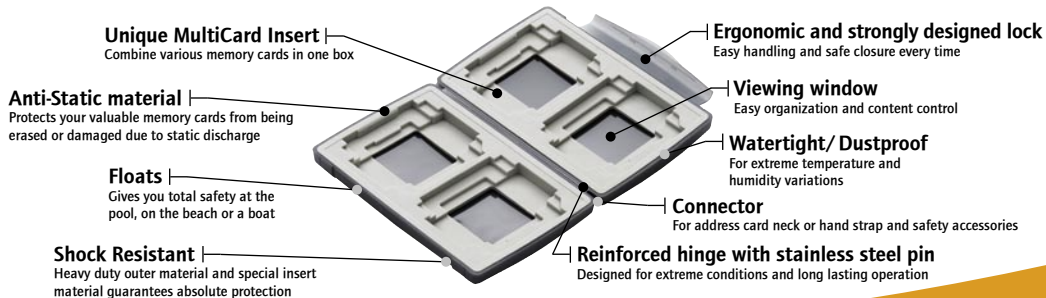

## Gepe Card Safe™: Breathtaking moments stored safely

The photo of you conquering the mountain, the digital video of your child's first steps: moments that need to be remembered. But what if a digital memory card is damaged? Then, your most valuable images may be lost. To prevent this from happening, Gepe has developed its

CardSafe™ product range. All standard memory cards, from mini cards to Memorystick™ to Compact Flash™ fit into the safes. To make them really safe, all safes are dustproof, float to the surface, are weatherproof and feature an antistatic inner material.
